YOKE New compact links – Lightweight master links and quad assemblies with low temperature performance

YOKE's recent investment in welding capabilities has enabled us to react to the ever changing market demands for reduced weight slings in new and existing markets. The new Extreme 100 compact links have all the features you expect from the family of YOKE welded master links, particularly fatigue strength and now with the compact design to enable you to reduce sling weights for easier handling.

- Rated for G8 and G100 chain
- 6mm through 32mm chain size up to 85t WLL
- 25% Stronger than traditional G80 links of the same diameter
- Tempered at minimum 400C
- Fatigue Rated for 20,000 cycles at 1.5 times the WLL
- Engineered flat on each link and sub link for ease of connection with a YOKE G80/G100 Omega link or chain connector
- Manufactured in accordance PAS 1061 and ASME B30.26

YOKE's range of Extreme compact links X002 and X006 are up to 35% lighter than the range of traditional master links and quad assemblies. Our continued development of material technology has resulted in weld ability of material that can provide users the compact links that not only offer high WLL and fatigue strength but also the benefit of lighter weight slings. These improvements in materials deliver the benefit of a more cost effective solution for the sling manufacturer.

Users of lifting equipment continue with their demands for light weight, high performance lifting equipment, and the Extreme range certainly offers this solution. Look for the YOKE Extreme 100 range of products that give you confidence to work in all conditions. Safety is our first priority!
